Antony Mlelwa (Trizy Magno)

Blockchain fundamentals, crypto opportunities & INKRYPTUS case study

Co-leads knowledge challenge & giveaways

Charity Aron

Digital asset security & personal responsibility

Co-leads knowledge challenge & giveaways

Father Mo

Masterclass host and program moderator

Manages transitions, Q&A and timekeeping

SESSION GUIDE

Blockchain & crypto

2:40–3:10 PM · 30 MINUTES · TRIZY MAGNO

01 / Understanding blockchain

Purpose: Make the technology understandable beyond speculation and price movements.

- What blockchain is–and what it is not.
- How shared records, transparency and verification work.
- Blockchain versus cryptocurrency: two different concepts.
- Examples beyond trading: records, supply chains and ownership.

3:10–3:30 PM · 20 MINUTES · TRIZY MAGNO

02 / Exploring opportunities through crypto

Purpose: Explain where tokens help people access products and services.

- Digital tokens and common functions.
- Staking, DeFi and blockchain-based economic participation.
- Utility versus speculation and financial risk.

Teaching distinction: Not every blockchain application requires a token. Access does not guarantee profit.

CASE STUDY

The INKRYPTUS ecosystem

3:30–4:10 PM · 40 MINUTES · TRIZY MAGNO

Discover the INKRYPTUS Wallet ecosystem and learn how the INKY token is used within its services. This session explores token utility, staking and responsible participation.

Project introduction

The vision behind INKRYPTUS and the needs it aims to address.

Wallet ecosystem

An introduction to wallet features and digital asset services.

INKY token

Token utility, economic structure and the role of participation.

Staking

How participation and reward allocation work, including limitations.

Risks and decisions

Understanding market, custody, technology and business risks.

Important: Token utility and participation do not guarantee investment returns. Review the relevant terms and risks before making financial decisions.

SECURITY SESSION

Security & responsibility

4:10–4:40 PM · 30 MINUTES · CHARITY ARON

Protecting digital assets

Participants should leave with practical safeguards they can apply immediately.

- Custodial and non-custodial wallets: key trade-offs.
- Private keys and recovery phrases: safe management.
- Recognizing phishing, impersonation, fake apps and malicious links.
- Device hygiene, account authentication and transaction verification.
- Risk limits, responsibility and making informed decisions.

Key lesson: Holding your own keys is not automatically safer. Security depends on operational discipline and recovery practices.

YOUR EXPERIENCE

Take part in the masterclass

4:40–5:00 PM · INTERACTIVE Q&A

Ask questions about blockchain, cryptocurrency, the INKRYPTUS ecosystem and digital asset security. Father Mo will moderate the discussion with the presenters.

5:00–5:20 PM · CHALLENGE & GIVEAWAYS

Put your new knowledge to the test in a friendly audience challenge led by Charity Aron and Trizy Magno. Answer questions from the masterclass for an opportunity to win giveaways.

5:20–5:30 PM · CLOSING & GROUP PHOTO

Join Father Mo and the presenters for final reflections and a group photograph to mark the end of the masterclass.
